

CCA Moves Forward With New Population Health Analytics Tool

Community Care Alliance has finalized a new population health analytics tool contract with **The Garage**, based out of Orlando, Florida. Final agreements were signed in November and initial configuration has begun. First steps will be to set up and populate our historical data and calibrate our regular claims files within the new system. Secondary priority will be put on connecting participants EMR's to the platform, we intend to tackle this by grouping those with the same EMRs.

The Garage offers a comprehensive analytics platform with enhanced features surrounding care coordination, scheduling, tele-health, and artificial intelligence. It has the capacity to expand with CCA as we shift our business to include not only Medicare but also self-funded and commercial contracts as well.

The Garage will replace our current analytics tool, eCW, which will remain active within our organization through March of 2019.
