

In accepting this award on behalf of the work ECT2 has undertaken in Katherine, Northern Territory, I would like to acknowledge the partnership formed with both the Department of Defence and Power and Water Corporation to design, fabricate, transport, install and commission a treatment system within four months of PFAS being identified in the drinking water supply. We thank Power and Water Corporation for their collaboration and the Department of Defence for their foresight in dealing with the PFAS challenge in Australia and working with us lock step all the way on this project. This project was truly a global effort that required a team of dedicated professionals to execute. Well done team ECT2 and our partners Power and Water Corporation and the Australian Department of Defence.

Finally, a big thanks to ALGA and sponsors for representing and recognising the industry in this way and for putting on such a great event. Have a good evening.
